Details of *Hair Loss Treatments* that work. There are a lot of hair loss products available but the vast majority do not work.

Although hair loss very rarely actually needs to be treated, a lot of people seek a hair loss treatment for cosmetic reasons.

As with most products what works for one person may not work for another, there are various reasons for this and no guarantee can be given that any product will work.

When you are considering any type of hair loss product you must carefully examine all the options available.

Sometimes taking a hair loss product like Propecia which involves taking a drug is not suitable for everyone.

### Dutasteride

Dutasteride works in a similar way to finasteride, the active ingredient in Propecia (finasteride) hair loss treatment.

They are both oral tablets, taken daily, that work by inhibiting the 5-alpha-reductase enzyme that is responsible for converting testosterone to DHT. DHT is the hormone associated with male pattern hair loss and prostate gland enlargement. Dutasteride also inhibits an additional 5-alpha-reductase enzyme, which means in theory that it is a stronger treatment than finasteride. This also means that the side effects can be stronger too.

Dutasteride, sold under the brand name Avodart among others, is a medication primarily used to treat the symptoms of an enlarged prostate. It has been shown in

### Propecia

The world top selling hair loss product used by millions of men throughout the world.

Propecia is a brand name for finasteride 1mg tablets, which is a medicine that increases hair growth and helps prevent further hair loss in men with male pattern baldness.

Propecia tablets contain the active ingredient finasteride, which is a type of medicine called a 5-alpha reductase inhibitor.

Finasteride works by blocking the action of an enzyme in the body called 5-alpha reductase.

### Revivogen

Revivogen hair loss product claims to have been proven scientifically to work for hair loss using all natural powerful ingredients to take a multi-function approach to target the fundamental cause of hair and scalp problems.

The signature product is a topical leave-on serum that utilizes nature's most powerful ingredients to combat hair loss. Revivogen MD Scalp Therapy blocks DHT to reduce shedding and stimulate growth.

### Rogaine Foam

Rogaine is a vasodilator. Exactly how Rogaine works to regrow scalp hair is not fully known. It may dilate blood vessels in the scalp. This may improve hair follicle function and stimulate scalp hair growth.

Rogaine-foam remains the only foam hair loss treatment that's been clinically proven to help stop and even reverse hereditary hair loss.

Rogaine gets to work by boosting the flow of blood to your hair follicles, helping to strengthen your hair and encourage new growth.

### Rogaine Foam for Women

The new Women's Rogaine formulation contains 5% minoxidil. Minoxidil is thought to act at the level of the hair follicle, possibly directly stimulating hair follicle epithelial growth. It may induce follicle hypertrophy and a return to more normal hair follicle diameter and depth in existing small follicles (eg, regrowth) rather than stimulation of new follicle formation.

In a clinical study of more than 400 women, 8 out of 10 women who used Women's Rogaine Foam regrew thicker hair, with clinical results in
