Boost Hair Growth with the Theradome Helmet

By [MS Staff](#) | May 30, 2019 | [Theradome](#) | [Equipment](#), [Capes](#), [Headwear](#) & [Uniforms](#)

By middle age, approximately 40% of women show signs of male-pattern hair loss (androgenic alopecia), while 35 million men suffer from hair loss.

Enter the [Theradome](#) invented by Tamim Hamid.

The Theradome helmet uses laser hair regrowth treatment known as Laser Phototherapy (LPT), the most powerful and effective treatment for hair loss. Unlike Light Emitting Diodes (LEDs) devices, the Theradome laser light targets the stem cells at the base of hair follicles. This allows the formation of a new photonic pathway that can restore hair to a healthy state.

Easy-to-wear at home or at the office, the helmet contains 80 laser diodes, cool airflow and auto-scalp detection in a full coverage helmet.

FDA-cleared, the helmet is recommended by four out of five hair loss experts such as Bosley, Hair Club and other prominent medical clinics from all around the world, according to the company.
